

## **Aerodrome Emergency Plan Assessment and Aerodrome Full Field Emergency Exercise**

Aerodrome emergency planning prepares airports to cope with an emergency on, or in the vicinity of, their airfield. The objective is to minimise the effect of an emergency, save lives, and establish and test procedures for coordinating a multi-agency response. Australian regulations require airports complete Full Field Emergency Exercises every two years, with assessments or partial exercises required in the intervening time.

Our aviation specialists are experts in this field.

Quality is not an act ... it's a habit created

We understand your risks, compliance needs, operational requirements and the need for happy staff and stakeholders, and safe customers.

We help plan, implement, and review your AEP.

We coordinate all elements of tabletop or full field emergency exercises.

## Aerodrome Emergency Plan Assessment

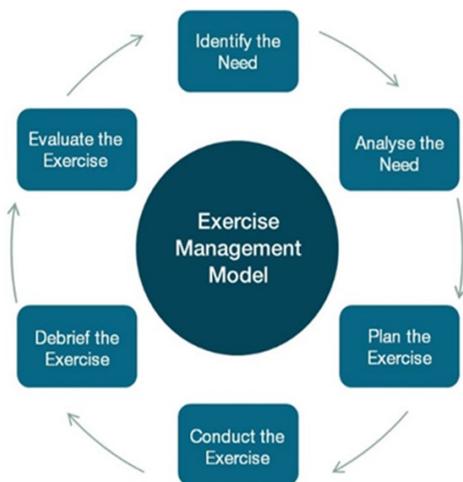

Avisure can review your Aerodrome Emergency Plan (AEP) to address the requirements of the CASA Manual of Standards (MOS) Part 139 (Aerodromes) 2019, align with current operational, organisational and contractual arrangements, and if required to address issues raised in Annual Technical Inspections and CASA surveillance reports.

## Aerodrome Full Field Emergency Exercise

A comprehensive and frequently practised AEP, developed and maintained in consultation with all responsible agencies, is essential to ensure that loss of life and suffering in the event of an accident is minimised.

We assist your aerodrome, in conjunction with the local emergency responders to test the AEP and validate its effectiveness through a Full Field Emergency Exercise. The aim is to ensure your aerodrome has a timely, measured, and coordinated response to incidents and emergencies.

Avisure adopts a structured approach to ensure the success of the exercise. The exercise management model (left) highlights the stages required to designing, conducting and evaluating an effective exercise. Our experienced team can plan, facilitate, debrief and evaluate exercise for airports of all sizes.
