

## Wildlife Hazard Assessment

- Avisure assessments are hands-on with close collaboration with the client.
- Entry and exit meetings ensure clarity in our approach and open discussion on audit findings.
- On-airport and off-airport assessment of process and procedures.
- Risk assessment based on wildlife surveys and strike data.
- Our reports detail appropriate short, mid, and long term recommendations to better manage the wildlife strike risk.
- Compliance assessed against international (International Bird Strike Committee – Best Practice Standards) and national standards and regulations.

# How are you managing your risk?

Programs that are out-of-date, non-compliant or poorly executed do not help you manage your wildlife risks. A Wildlife Hazard Assessment is like a health-check for your program, making sure it is effective and moving in the right direction.

We audit your program against national civil aviation regulations and international best practice standards. These key documents provide for an objective and standardised audit that is replicable and comparable. We also complete a thorough assessment, including standardised surveys, of on- and off-airport wildlife hazards, and a review of practices and procedures.

We then complete a risk assessment to determine your high and moderate risk species. We provide a transparent, logical and systematic approach to the identification and treatment of wildlife related risks. Avisure risk assessments use quantitative industry-indorsed methods that assesses either strike data or survey data, and in many instances, both.

## Wildlife Hazard Assessment

### Our risk assessments will:

- identify high, moderate and low risk species
- determine risks by time of day and time of year
- identify locations on- and off-airport that contribute to the strike risk.

Our risk assessment methods are standardised and robust, allowing for repeated assessments so that you can monitor your risks over hours, months, seasons and even years.

### Our Wildlife Hazard Assessment process starts with:

- issuing questionnaires to key personnel involved in wildlife hazard management
- reviewing your strike data and any related documents
- calculating a preliminary risk assessment.

### Then we conduct a site visit to:

- meet with you and your team
- visually inspect and survey the site, including airside, landside and potential hazards within 13km
- cross-reference your program and actions against the regulations and standards.

### We finish the Wildlife Hazard Assessment by submitting a report that:

- identifies your compliance with regulations and standards
- reviews risk assessment results
- provides recommendations to achieve, and in many cases exceed compliance.
