

## Wildlife Management Program

Avisure is a world leader in wildlife strike mitigation having researched the best and emerging practices from around the world over the past two decades and has developed specialised programs for a number of leading international airports.

Models from around the world have proven that a large reduction in risk can be achieved by using a more focused and specialised approach to wildlife management. Our approach uses biologists trained in aerodrome operations to conduct routine on-ground management of wildlife.

Our team can guide and assist your existing wildlife management team to achieve its performance goals or Avisure can supply a full team of wildlife management officers to address wildlife strike risk at your airport.

*It's not an off-the-shelf product.  
We make it work for you.*

## **Wildlife Management Program**

Avisure's staff include ecologists, wildlife veterinarians, endangered species specialists, environmental strategists, and pilots.

Irrespective of primary training, all field staff are cross trained as aerodrome reporting officers; to ensure they are just as much in tune with the complexities of modern airport operations as they are with the subtleties of wildlife behavior.

Developing a strategic and integrated Wildlife Management Program (WMP) is the best solution to reduce your wildlife strike risk.

Based on international standards, tried and tested techniques from years of experience, and national regulations, we can help you build a Wildlife Management Program that addresses your unique wildlife issues and recommends the most appropriate course of action.

Avisure's team of experts have developed and customised management programs for airports of all sizes and operations, ensuring practical and realistic application with positive outcomes.

We build programs that:

- ensure regulatory compliance
- address legislative requirements
- defines the objectives of your program
- sets goals and targets
- assesses your wildlife risks
- provides staff with direction and know-how to manage hazards
- specifically tailored to each client.

A good Wildlife Hazard Management Program will benefit an airport but it can also assist airlines, pilots, ground crews, air traffic control and off-airport stakeholders such as landowners, government departments and even regulatory bodies.
